OUR POSITIONING

FinIFRS unifies financial reporting, intelligence and compliance — for every finance function.

01

UNIFIED PLATFORM

One workspace for the entire finance function

Consolidated financial statements, MIS, statutory reporting, and analytics into a single connected environment — replacing fragmented spreadsheets and disconnected legacy systems.

02

AI-NATIVE INTELLIGENCE

Automation built into every workflow

AI-driven reconciliation, anomaly detection, natural-language querying, and predictive insights — engineered to remove repetitive effort and elevate finance into a strategic function.

03

INDUSTRY-AGNOSTIC

Built for any business model

Whether manufacturing, trading, services, e-commerce or a high-growth startup — FinIFRS adapts to your chart of accounts, source systems, and Ind AS reporting requirements.

INDUSTRY CONTEXT

Three structural challenges constrain finance teams across industries today.

01

Fragmented data silos

30-40% of finance team capacity

Critical financial data scattered across disconnected systems — ERP, accounting, banking, payroll, AR/AP, inventory — creating reporting delays, data inconsistencies, and reconciliation overhead.

5+

disconnected source
systems on average

02

Manual month-end close

Days-to-weeks turnaround

Time-consuming manual processes for reconciliations, accruals, intercompany adjustments, and Ind AS disclosures introduce human error, audit risk, and slow down statement preparation cycles.

80%

of close effort is manual

03

Governance & audit gaps

Increased compliance exposure

Absence of collaborative tools, version control, and immutable audit trails leads to accountability gaps and increased exposure to statutory scrutiny — particularly during audits and board reviews.

Limited

data lineage across
reporting

SOLUTION OVERVIEW

FinIFRS is an AI-native financial intelligence platform for the modern finance function.

THE PLATFORM

One platform. The full finance stack.

FinIFRS consolidated financial reporting, MIS, accounting, compliance and analytics into one connected workspace — eliminating the spreadsheet sprawl and tool fragmentation that limits today's finance teams across every industry.

"Bloomberg Terminal meets AI — engineered for the modern finance function."

AI Reconciliation

ML-based matching across systems

Financial Statements

Automated, audit-ready outputs

MIS & Analytics

Real-time dashboards for leadership

Compliance Engine

Ind AS & statutory rules built in

Unified Data Hub

Single source of truth across systems

NLP Query Layer

Plain-English finance Q&A

MVP DELIVERY APPROACH

We start with the highest-leverage workflow: financial reporting and MIS.

Our MVP is built on three operating principles — each chosen for its direct impact on speed, accuracy and trust across any finance function.

PRINCIPLE 01

Financial Reporting & MIS

Start at the core: automated Balance Sheet, Profit & Loss, Cash Flow, and Notes under Ind AS — plus board-ready MIS dashboards. An accurate, connected reporting foundation that scales with the business.

Faster close. Audit-ready outputs.

PRINCIPLE 02

Accuracy First

Data lineage and validation rules at the core of every workflow. Immutable audit trail for full transparency. Zero-tolerance for errors — every data point traceable from source to report.

Reduced restatement risk. Auditor confidence.

PRINCIPLE 03

Connected Workspace

Collaborative review with version control and role-based access. Secure data ingestion and reconciliation. High governance standards with easy export and integration to your existing systems.

Team velocity. Institutional governance.

MVP CAPABILITIES

Three engineered capabilities deliver the finance function from raw data to regulatory-ready output.

01

Secure Data Ingestion & Reconciliation

From source to staging — clean, validated, traceable

- Automated ingestion from ERP, accounting, banking, AR/AP, payroll & sub-ledgers
- ML-powered reconciliation across GL, sub-ledger, and operational systems
- Built-in governance with zero-tolerance error tolerance and exception workflows

02

Automated Financial Statements & MIS

From validated data to board-ready output — in minutes, not days

- Ind AS-compliant Balance Sheet, P&L, Cash Flow and Notes generated automatically
- Real-time MIS dashboards with drill-down to source transactions
- Version control, collaborative review, and immutable audit trails for every report

03

Export, Integration & Onward Delivery

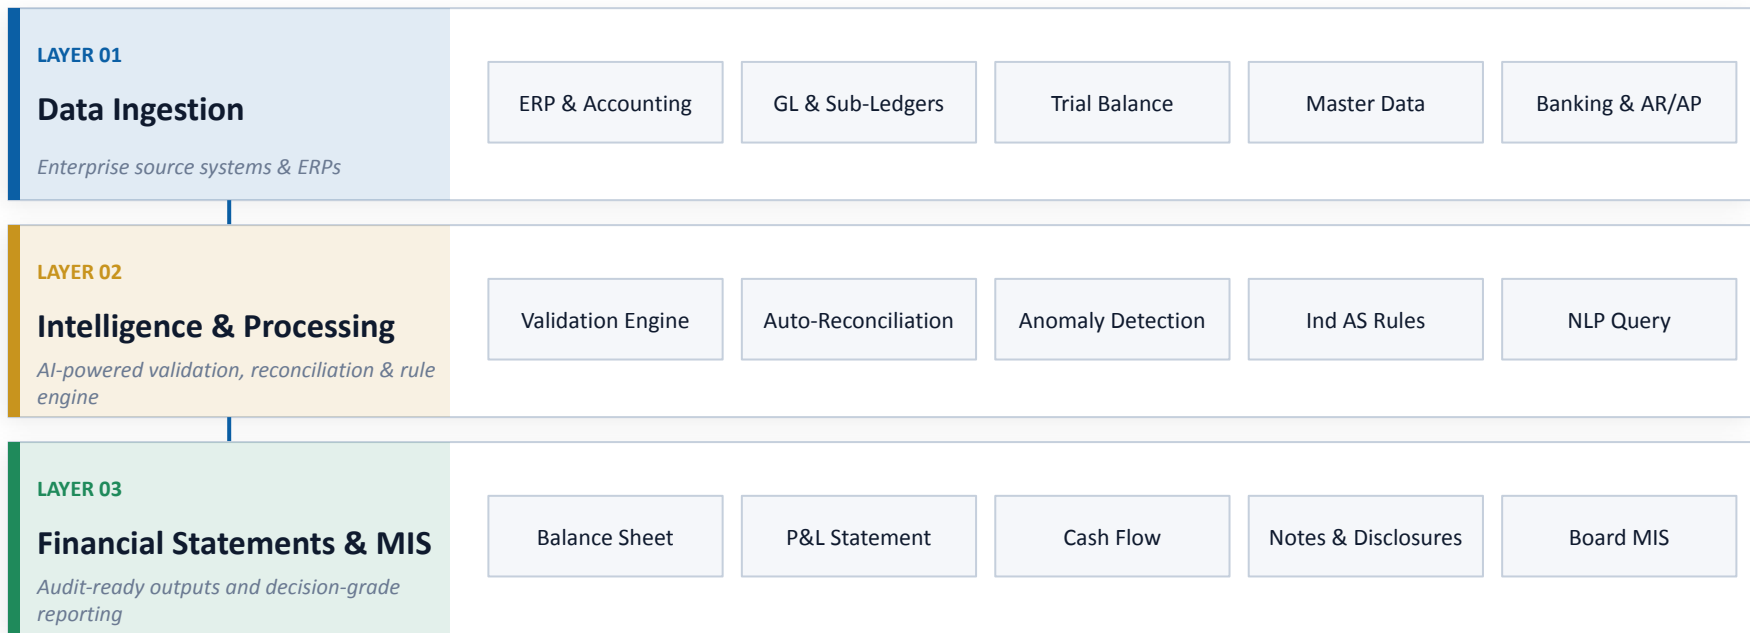

From FinIFRS to your systems — seamless and lossless

- One-click export to Excel, PDF, and statutory-ready formats with full data lineage
- API and file-based integration with downstream regulatory and BI tools
- Maintain accuracy and traceability across every handoff and reporting cycle

PLATFORM ARCHITECTURE

Three intelligent layers move data from source systems to audit-ready financial statements.

End-to-end architecture: raw enterprise data flows through validation and AI intelligence to produce trusted, regulatory-ready outputs.

THE FINCLOSE EFFECT

FinIFRS becomes the autopilot for your finance team — freeing them to focus on insight, not effort.

70%

Reduction in manual reconciliation effort

5x

Faster month-end close cycle

99%+

Reconciliation accuracy at scale

100%

Audit trail and data lineage coverage

From manual workflow to autonomous finance operations

WORKFLOW

TODAY

WITH FINCLOSE

GL Reconciliation

Manual spreadsheets · multi-day cycles · error-prone

AI-matched · exception-only review · near real-time

Financial Statements

Days to compile · multiple revisions · audit chase

Auto-generated · single source · audit-ready outputs

MIS & Board Reporting

Custom builds · stale data · limited drill-down

Live dashboards · drill-to-source · NLP-queryable

A focused path from discovery to live operations.
